

# GOFA™ SHOVELS

The multi-functional shovel / spade with pivoting blade

Tested for 12 years - Tough design - Long life span on working parts  
Digs deep holes with ease - Perfect for farm duties - The ideal tool for tough terrain

## The Perfect Multi-Digger!

Designed and Made in Australia

- The GOFA® Shovel with pivotal blade allows you to dig holes where machines can't.
- The blade pivots up to a maximum of 90° while digging, allowing deep, straight-sided narrow holes to be dug. This means large volumes of soil can be scooped out of the bottom of the hole - which traditional shovels and spades cannot do.
- Use as a hoe to backfill and move dirt around. Can even use as rammer when blade is folded up against the shaft.
- Standard 3mm spring-steel blade. Custom blades can be made to suit your needs. Attached to a powder-coated galvanized handle.
- Ergonomically designed for improved working posture.
- Winner of the “Invention of the Year - Field Day Awards” New Zealand.
- Steel construction, hand made and guaranteed.

Unit 4 / 1124 Abernethy Road, High Wycombe, 6076
